Version 1.800 (2016-04-22) ................................................. 3
Version 1.826 (2016-06-12)

- Adjusted the statistics under /stats/popular
- Documentation fixes
- Improved notifications on the upload process
- Added documentation for 0-downtime upgrades
- Debian packages now come with the 0-downtime upgrade feature built-in

Version 1.821 (2016-05-10)

- Added reset password by mail (#48)
- Added admin role which is able to set most of the site settings (#49)
- Added experimental popular sorting (#44)
- Add HTTP auth for robots on private sites (#50)
- UI improvements (number of texts pending on the bookbuilder)
- Updated translations: fr, it, hr
- Updated documentation

Version 1.811 (2016-05-01)

- Decoupled mail sending from the application [INTERNAL]
- Optimized /opds/crawlable
- Removed simp_le from the stack and use Protocol::ACME instead (see the Let’s Encrypt section of the README)
- Updated localization

If you are the simp_le cronjobs in place, please remove them, as the certificate renewal is already taken care of by the amusewiki daemon.

Version 1.801 (2016-04-22)

- Added help page for OPDS

Version 1.800 (2016-04-22)

- Decoupled the localization framework from the application
- Completed translations: fr and mk.
- Updated dependencies Text::Amuse and Text::Amuse::Preprocessor

The upgrade should be transparent, but please see LOCALIZATION.txt for details if you are using the lexicon.json file to override localization. Otherwise there is no action to take.
