Embedding an existing text .............................. 3
Non-interactive creation of texts ...................... 3
Parameters .............................................. 4
Embedding an existing text

Say the URL of the text you want to embed is https://amusewiki.org/library/bookbuilder-tutorial, you can add an iframe with https://amusewiki.org/library/bookbuilder-tutorial/embed to have the infobox with the downloads.

Example:

```html
<iframe src="https://amusewiki.org/library/bookbuilder-tutorial/embed" width="700px" height="200px">
</iframe>
```

Non-interactive creation of texts

This procedure lacks any human interaction and it relies completely on the HTML conversion to be good enough. Worst case scenario, you are going to get a text which needs fixing.

You need an existing user on the site.

The API endpoint is /remote/create, e.g. https://sandbox.amusewiki.org/remote/create.

You need to do a POST request with some mandatory and some optional parameters.

Request:

```
$ curl -F __auth_pass=XXXXX \
   -F __auth_user=tester \
   -F title=prova \ 
   -F textbody='Hello <em>hello</em>' \ 
   https://sandbox.amusewiki.org/remote/create
```

Response is a JSON string, which holds the URL of the text which is going to be created and the job URL with the publishing.

```
{
   "url":"https://sandbox.amusewiki.org/library/prova",
   "job":"https://sandbox.amusewiki.org/tasks/status/17097"
}
```

If you are missing some mandatory parameters you get an error:
curl -F __auth_pass=XXXX \
   -F __auth_user=tester \
   -F textbody='Hello <em>hello</em>' \
   https://sandbox.amusewiki.org/remote/create

Response:

{"error":"Missing mandatory title and textbody parameters"}

If you miss the authentication parameters, you get a 401 response.

**Parameters**

**Mandatory**

__auth_user  The username
__auth_pass  The password
title  The text title
textbody  The HTML body

**Optional**

They are the very same parameters you can find in the /action/text/new form.

subtitle  Text subtitle
author  Text author
notes  HTML string with the notes
teaser  HTML string with the teaser
LISTtitle  Text for indexing
SORTauthors  List of authors, comma or semicolon separated list
SORTtopics  List of topics, comma or semicolon separated list
date  Date of the text
uid  Unique identifier (for multilanguage support)
cat  Fixed category list (separated by space)
slides Boolean if slides are required (if the site sets that)
source String with the source notes
lang  ISO code language (e.g. en)
pubdate Publication date
