Translating the interface

Contents

Enabling the language in the admin interface

Go to `/admin/sites`, edit, set the Locale and/or add the code to the Multilanguage setting.

Technical details (for developers)

See `LOCALIZATION.txt` in the root of the distribution.

This document also contains the procedure if you want to override the translation on a per-site basis.

Translating the interface (for translators/non-tech)

1. Install Poedit.

2. Go to `https://github.com/melmothx/amusewiki/tags` and download the **latest**. Unpack the archive and find the .po file with your language code in the `lib/AmuseWikiFarm/I18N` directory.

3. Open the .po file with Poedit. Add the translations. Please preserve the %1, %2, in the message. They are placeholders for dynamic content. Save (of course). Send the .po file to `melmothx (at) gmail (dot) com`.

Done.
When a new release comes out, repeat from point 2 (unless you uninstalled Poedit in the meanwhile).
